

How can we evaluate possibilities for the future of I-81?

The infographic illustrates a five-step process for evaluating possibilities for the future of I-81. It begins with a large cloud of blue dots representing initial ideas. A red dot on this cloud is connected by a dashed line to a text box explaining the criteria for evaluation. Below the cloud, a sieve is shown with blue dots passing through it, representing the selection of strategies. A red dot on the sieve is connected to a text box about initial screening. Further down, a river flows, representing the final solutions. A red dot on the river is connected to a text box about the evaluation criteria. The process concludes with a text box about the final solutions that will emerge from the evaluation.

After we established goals, we developed criteria to measure and evaluate different possibilities to see which one(s) will best achieve our common goals.

IDEAS

Many different ideas have been generated about future options for I-81

STRATEGIES

Strategies were identified based on initial screening of ideas from the public

EVALUATION

The list of evaluation criteria will be used to reduce possible strategies to a smaller list of potentially viable options

SOLUTIONS

A project or projects that may be implemented will emerge from the list of potentially viable options

FUTURE OF I-81
